

# C-Band 5G Filters

WESCO®

ANIXTER

With the introduction of 5G networks, C-Band frequencies will now be shared with a wider range of services. The resulting interference signals can be powerful enough to saturate the sensitive C-Band satellite receiving systems which may result in total loss of service.

Alga Microwave has designed a filter that will clear portions of the C-Band spectrum to mitigate disruption and interference of existing services due to the reallocation of the spectrum to 5G transmissions. Available in either the “Blue” or the “Red” bandpass option, they can be used in both single and multi-feed receive antenna applications, are environmentally sealed, moisture resistant and are easily installed between the C-Band feedhorn and the LNA or LNB.
