

MAX VOLUME. MAX SAVINGS.

Take Your Network to the Next Level with MaxWrap®

MaxWrap is the new fabric mesh solution that can be applied to cable as it is pulled into conduit, eliminating the need for a two-step cable pulling process. This reduces the time to market by utilizing existing ducts/pathways more efficiently.

- **Purpose-built** for full conduit overlaid applications
- **Specifically designed** for 2" or smaller pathways
- **Strategically engineered** to reduce cable load under tension during installation
- **Less labor costs:** reduce installation time and avoid delays associated with installing new duct in an overbuild application
